Mind Technica

CASE STUDY

PUBLIC DATA, COLLECTED AND ALWAYS UP TO DATE, WITHOUT ANYONE COPYING IT BY HAND

GIA

Chartered surveyors · London, UK

AI systems & automation

THE CHALLENGE

Every week, people at GIA spent several hours looking up publicly available data by hand, one source at a time, and copying it into their own system.

It was slow and repetitive, and some useful insights were out of reach because nobody had the time to pull all the data together.

WHAT WE BUILT

1. Collects all the publicly available data GIA needs in one go, behind the scenes
2. Uses AI to read it and extract the details that matter, turning it into one clean, consistent format
3. Loads it straight into GIA's own system, ready to use

Nobody has to go looking any more. The team opens their system and the latest data is already there, always kept up to date.

THE RESULT

- ✓ Several hours a week of manual lookups removed
- ✓ Data delivered directly into GIA's own system, ready to use
- ✓ All the data gathered at once and always kept up to date, with no one involved
- ✓ New insights the team didn't have before, because the data is finally in one place

> “We used to spend several hours every week looking this information up by hand. Now it's simply there in our system when we need it, and it gives us new insights and intelligence. Mind Technica understood what we needed quickly and built something that just works.”

Justin McHenry, Consultant, GIA

IS YOUR TEAM COPYING INFORMATION BY HAND?
